Forty-nine apps, one place to work from

Most organisations run on a patchwork: a finance package here, a spreadsheet there, a specialist system nobody can integrate. Every join is a place where data is re-keyed, and every re-key is a place where it goes wrong.

This suite takes a different approach. Forty-nine applications, each built for the way a particular trade actually works, sharing one set of records underneath. Your assets, your people, your customers and your ledger are held once and used everywhere.

Staff reach all of it from a single index page in the browser. No desktop installation, no per-machine licence, no separate login for every system. Open the page, pick the application, get on with the work.

There are three ways to reach them. Put a button on the website you already have and it opens straight into your chosen app; use the Tucalo site and switch on the features you want; or have a bespoke site built to your own design. If the app you need isn't in the store yet, we will build it and add it.

49

APPLICATIONS

covering back office, industry, maritime, land, hospitality and point of sale

8

SECTORS

grouped so staff find the right tool without being trained to

1

INDEX PAGE

one browser link, searchable, on every device your team already owns

One index. Every application.

Staff open one page. Forty-nine applications are laid out by sector, each on its own plate, and a search box narrows the list as they type.

THE INDEX PAGE: EVERY APPLICATION, GROUPED AND SEARCHABLE.

● Grouped by sector

Eight colour-coded groups, so someone new finds the right application without being shown where it lives.

● Filter by sector

Tap a sector to see only its applications. Tap All to come back. A search that only matches elsewhere says so and offers the way out.

● Search as you type

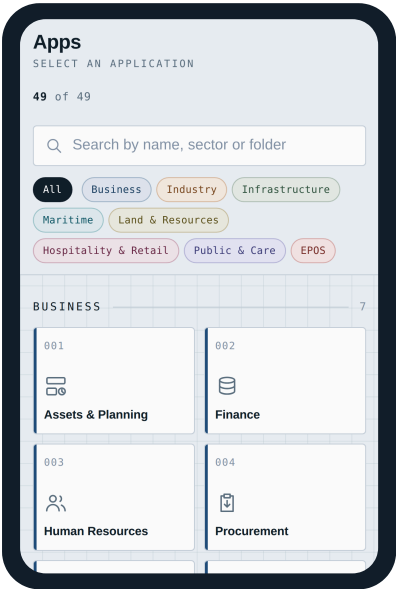

Matches on name, sector and folder. Press the forward slash key from anywhere on the page to jump into it.

● Nothing to install

It is a web page. Whatever the browser, whatever the device, there is no client software to roll out or keep updated.

Built for whatever is to hand

The same page serves a desk, a tablet on a shop floor and a phone on a pontoon. The grid reflows from seven columns to two; nothing is hidden on the small screen.

● Phone

Two columns, filters wrapped onto as many rows as needed. Every sector reachable without scrolling sideways.

● Tablet

Four or five columns. Comfortable for gloved hands and a good fit for wall-mounted screens.

● Desktop

Six or seven columns. The whole estate visible in a single view.

● Dark mode

Follows the operating system, so night shifts and dim cabs are not staring at a white page.

RUNS ON	Any modern browser; PHP 7.4 or newer on the server
INSTALLATION	None on the client. No plugins, no app store
ACCESSIBILITY	Keyboard navigable, screen-reader labelled, visible focus
WITHOUT JAVASCRIPT	All 49 applications still listed and reachable
PRINTING	The index prints cleanly as a reference sheet
EXTENDING	New applications are one line in a configuration file

BUSINESS

The back office

7 APPLICATIONS

The applications every organisation needs, whatever it sells. Finance, people, buying and customers, sharing one set of records rather than four.

001

Assets & Planning

Every asset you own in one register, with lifecycle cost, maintenance plan and forward schedule held against each.

Asset register
Lifecycle costing
Forward planning

002

Finance

Ledgers, invoicing, budgets and management reporting, fed directly by the operational applications alongside it.

Nominal ledger
Invoicing
Management reporting

003

Human Resources

People records, contracts, absence, training and payroll data held once and kept current across every site.

People records
Absence & leave
Training matrix

004

Procurement

Requisition to purchase order to receipt, with supplier pricing, approval limits and spend visibility built in.

Requisitions
Approval workflow
Supplier pricing

005

CRM System

Contacts, opportunities and account history in one pipeline, so nothing depends on who happens to be in the office.

Pipeline
Account history
Activity tracking

018

Banking

Accounts, payment runs and reconciliation, matched against the ledger without re-keying a single line.

Reconciliation
Payment runs
Cash position

039

Professional Services

Projects, timesheets and billable work, from engagement to invoice, with utilisation visible throughout.

Time recording
Project billing
Utilisation

These applications underpin every other section of the suite: one ledger, one supplier list, one asset register, one set of people records.

INDUSTRY

Making things

7 APPLICATIONS

Production environments where traceability is not optional. Batch, part and programme records that hold their shape under audit, from a machine cell to a shipyard.

006

Aerospace & Defence

Airframe programmes, controlled parts and certification records, with traceability that holds up to audit.

Part traceability

Certification

Programme control

007

Automotive

Vehicle build, parts supply and dealer stock, tracked from line-side through to customer handover.

Build tracking

Parts supply

Dealer stock

009

Pharma

Batch records, validation, cold chain and expiry, with the documentation trail regulators expect to see.

Batch records

Cold chain

Validation

010

Robotics

Cell configuration, uptime and telemetry in one place, so a stoppage gets diagnosed rather than guessed at.

Cell configuration

Uptime

Telemetry

026

Manufacturing

Works orders, routings and shop-floor progress, with costed output measured against plan as it happens.

Works orders

Routings

Shop-floor data

033

Ship Builder

Hull blocks, yard slots and outfitting sequenced together, so steel, trades and berth time line up.

Block planning

Yard slots

Outfitting

034

Custom Yacht

Bespoke builds with owner specifications, change orders and variation costs tracked from contract to delivery.

Owner specifications

Change orders

Variation costs

Shares one set of records with the back office — Finance, Procurement, Assets & Planning and Human Resources — so nothing is entered twice.

INFRASTRUCTURE

Infrastructure and transport

8 APPLICATIONS

Fleets, networks and sites: assets that move, wear out and have to be certified. Condition, compliance and cost tracked against each one.

008

Aviation

Fleet records, flight hours and maintenance intervals, with airworthiness documentation attached to each airframe.

Airframe records

Flight hours

Maintenance

011

Construction

Sites, valuations, subcontractors and retentions, with cost set against certified value on every job.

Valuations

Subcontractors

Cost/value

012

Plant & Equipment

Hire fleet, servicing, inspections and off-hire, so you know where every machine is and what it is earning.

Hire desk

Servicing

Inspections

013

Rail Maintenance

Track, structures and lineside assets, with condition records, renewals and possession history against each.

Asset condition

Renewals

Possession history

015

Utilities

Networks, meters and field jobs, from the fault report through to the engineer's completed worksheet.

Network assets

Metering

Field jobs

024

Haulage

Loads, drivers, vehicles and tachograph data, planned and proved from booking through to proof of delivery.

Load planning

Tacho compliance

PODs

042

Storage & Logistics

Warehousing, stock movements, picking and despatch, with live locations down to bin level.

Stock locations

Pick & pack

Despatch

049

Rail Train Management

Road-rail vehicles with certification, operator competence and possession bookings held against every machine.

RRV fleet

Certification

Operator competence

Shares one set of records with the back office — Finance, Procurement, Assets & Planning and Human Resources — so nothing is entered twice.

MARITIME

On the water

6 APPLICATIONS

Berths, quays, voyages and charters. Six applications built around how marinas, ports, shipping lines and yacht operators actually bill and schedule.

027

Marinas

Berths, annual contracts, visitor moorings and utilities, with occupancy and dues visible at a glance.

Berth allocation

Contracts

Visitor moorings

028

Ports

Vessel calls, quay allocation, cargo and port dues, scheduled and invoiced from a single record.

Vessel calls

Quay allocation

Dues & invoicing

029

Shipping

Voyages, cargo manifests and bookings, with laytime and demurrage calculated as the voyage runs.

Voyage management

Manifests

Laytime

030

Cruise & Passenger

Itineraries, cabin inventory and passenger manifests, from the first booking through to embarkation.

Cabin inventory

Manifests

Embarkation

031

Yacht Charter

Availability, crew, provisioning and charter agreements, with every booking costed before it is confirmed.

Availability

Crew & provisioning

Charter agreements

032

Yacht Share

Shared ownership handled properly: points, rotas, running costs and each owner's usage on record.

Ownership shares

Usage rotas

Cost apportionment

Shares one set of records with the back office — Finance, Procurement, Assets & Planning and Human Resources — so nothing is entered twice.

LAND & RESOURCES

Land and resources

6 APPLICATIONS

Yield, grade and volume. Whether it comes out of a field, a forest, the seabed or a seam, these applications measure what was taken and what it returned.

016

Farming

Fields, cropping plans, yields and livestock, with input cost and return measured per hectare.

Field records

Cropping plans

Livestock

017

Equestrian

Yards, liveries, feed, farrier and competition entries, with billing that follows each horse.

Livery billing

Horse records

Competition entries

019

Fish Market

Landings, auction sales and buyer settlement, with catch traceability from the vessel to the invoice.

Landings

Auction sales

Traceability

023

Forestry

Stands, felling plans, harvesting and timber sales, with standing volume tracked through to the mill.

Stand records

Felling plans

Timber sales

037

Mining

Extraction volumes, grades, haul cycles and stockpiles, reconciled against plan shift by shift.

Grade control

Haul cycles

Stockpiles

038

Oil & Gas

Wells, production volumes, permits and interventions, with allocation and downtime properly accounted for.

Production

Permits

Downtime

Shares one set of records with the back office — Finance, Procurement, Assets & Planning and Human Resources — so nothing is entered twice.

HOSPITALITY & RETAIL

Hospitality and retail

6 APPLICATIONS

Busy trading environments where margin is made or lost in the detail. Stock, covers, rooms, ranges and rents, watched closely enough to act on.

020

Pub & Restaurant

Covers, menus, cellar stock and gross margin, so a busy night turns out to be a profitable one.

Covers & bookings

Cellar stock

GP tracking

021

Brewery

Brews, fermentation, cask and keg tracking and duty returns, from the grist to the trade sale.

Brew records

Cask tracking

Duty returns

022

Meal Delivery

Orders, routes and rider tracking, with kitchen timing matched to the delivery window rather than hoped at.

Order routing

Rider tracking

Kitchen timing

025

Hospitality

Rooms, rates, housekeeping and guest accounts, with availability and revenue managed together.

Rooms & rates

Housekeeping

Guest accounts

040

Real Estate

Portfolio, tenancies, rent demands and viewings, with every lease event diarised before it arrives.

Tenancies

Rent demands

Lease events

041

Retail

Ranges, stores, pricing and replenishment, with stock and sales visible across every branch.

Range planning

Replenishment

Multi-store stock

Shares one set of records with the back office — Finance, Procurement, Assets & Planning and Human Resources — so nothing is entered twice.

PUBLIC & CARE

Public and care services

4 APPLICATIONS

Learners, patients, animals and audiences. Scheduling, records and compliance for organisations whose obligations are to people rather than products.

014

Education

Learners, timetables, attendance and estates, so the site and the people on it are managed in one place.

Learner records

Timetabling

Estates

035

Media

Titles, rights, production schedules and royalties, tracked from commission through to distribution.

Rights

Production schedule

Royalties

036

Healthcare

Patients, clinics, medical devices and servicing records, with scheduling and compliance kept in step.

Clinic scheduling

Device servicing

Compliance

043

Veterinary

Animals, treatments, practice stock and reminders, with clinical history attached to every visit.

Clinical history

Practice stock

Reminders

COMMONLY DEPLOYED ALONGSIDE

003

Human Resources

Staff, contracts, absence and training for the same site

002

Finance

Billing, funding streams and departmental budgets

001

Assets & Planning

Buildings, equipment and planned maintenance

004

Procurement

Buying, supplier agreements and approval limits

Shares one set of records with the back office — Finance, Procurement, Assets & Planning and Human Resources — so nothing is entered twice.

EPOS

Point of sale

5 APPLICATIONS

Five tills built for five very different counters, each posting straight through to stock and the ledger rather than into a day-end file somebody has to import.

044

EPOS Retail

Tills, tenders, promotions and shop takings, posting straight through to stock and the ledger.

Till operation

Promotions

Cash-up

045

EPOS Food & Beverage

Table service, tabs, course timing and kitchen tickets, priced and settled at the table.

Table service

Kitchen tickets

Split bills

046

EPOS Events

Ticketing, gate scanning and on-site sales, with takings reconciled while the event is still running.

Ticketing

Gate scanning

Live takings

047

EPOS Marina

Fuel, chandlery, berth payments and visitor dues, taken at the pontoon or over the office counter.

Fuel sales

Chandlery

Berth payments

048

EPOS Cruise & Passenger

Onboard accounts and cashless spend, settled to the cabin and closed out at disembarkation.

Cashless onboard

Cabin accounts

Settlement

COMMONLY DEPLOYED ALONGSIDE

041

Retail

Ranges, pricing and replenishment behind the till

020

Pub & Restaurant

Menus, covers and cellar stock on the same site

025

Hospitality

Rooms and guest accounts to charge against

027

Marinas

Berths and visitor dues taken at the same counter

Shares one set of records with the back office — Finance, Procurement, Assets & Planning and Human Resources — so nothing is entered twice.

GET IN TOUCH

Start where it hurts most

Most customers begin with the one application that solves today's problem, then add the others as each part of the business is tidied up. Others take the back-office apps first and build outwards. Either way the index page stays the same, and each app you add appears on it.

Talk to us for a free appraisal and some straight advice about which of the forty-nine is worth starting with. There is no tie-in, and you can leave whenever you like.
